Mathura, Uttar Pradesh - 281001, India

PROFILE SUMMARY

AI/ML engineer with hands-on experience in Computer Vision and LLM-based systems, focusing on building end-to-end AI pipelines from data preprocessing to deployment. Experienced in RAG pipelines, real-time CV systems, and applied deep learning. Comfortable working in Linux environments, integrating APIs, and optimizing inference pipelines. Seeking to contribute to production-grade AI solutions in CV and LLM domains.

EXPERIENCE

- Abroad Pathway Immigration Consultant Pvt. Ltd.** Nov 2023 – Dec 2023
Python Intern
Delhi, India
 - Automated data processing workflows using Python scripts, reducing manual processing time by 40%.
 - Cleaned and structured datasets for internal reporting and analytics.
 - Collaborated with team members to improve data reliability and workflow efficiency.
- GLA University** June 2024 – July 2024
AI Trainee
Remote
 - Built an AI-powered health assistant using LLM APIs for chatbot interaction and calorie estimation.
 - Integrated external AI APIs and handled structured user input/output pipelines.
 - Worked on prompt design and response evaluation.

EDUCATION

- GLA UNIVERSITY** 2022-2026
B.Tech in Computer Science (AI & ML)
Mathura, India
- Romex International** 2021-2022
Intermediate
Mathura, India
- Dr.R.M.SAHA Gloabl School** 2019-2020
High School
Mathura, India

PROJECTS

- IntelliVision: Real-Time Multi-Object Tracking & Event Detection Platform**
Techstack: PyTorch, OpenCV, YOLOv8, DeepSORT
 - Built a real-time multi-object detection and tracking system using YOLOv8 and DeepSORT to analyze live video streams and identify human activity and motion events.
 - Implemented automated event-based logging with time-stamped video clips and snapshots for surveillance and monitoring use cases.
 - Optimised the inference pipeline for low-latency real-time performance in smart environment scenarios.
- DocuMind AI: Retrieval-Augmented Knowledge Intelligence System**
Tech: DSPy, Transformers, Vector Retrieval
 - Developed an LLM-powered RAG system for context-aware question answering over custom document collections.
 - Built a document ingestion pipeline with chunking and embedding-based retrieval for efficient knowledge access.
 - Designed a modular retrieval-generation architecture using DSPy and improved response relevance through prompt and retrieval optimisation.
- AgroSmart AI: Predictive Irrigation & Water Optimization System**
Tech: Python, ML Models, IoT Sensors
 - Developed an AI-driven irrigation control system using sensor data and ML-based predictions to support precision farming.
 - Automated watering decisions based on soil moisture and environmental conditions for efficient resource usage.
 - Implemented predictive scheduling and real-time IoT sensor integration to reduce water wastage.

SKILLS

- **Programming Languages:** Python , SQL
- **Database Systems:** MySQL, SQLite, Vector Databases
- **Data Science & Machine Learning:** Pandas, NumPy, Scikit-learn, Data Preprocessing Pipelines, Model Training & Evaluation
- **AI/Deep Learning:** PyTorch, TensorFlow, HuggingFace Transformers LLMs, RAG Pipelines, Prompt Engineering
- **Systems & Deployment:** Git, Docker , REST APIs (FastAPI/Flask)
- **Computer Vision:** YOLOv8, DeepSORT, Mediapipe, OpenCV
- **LLM & Retrieval Tools** DSPy, LangChain , FAISS, ChromaDB

ACHIEVEMENTS

- Research Paper Published ([Predicting Telecom Customer Churn with Combined Machine Learning Models](#)) — ETCom 2025 IEEE Conference.
- Top 15 — Rabbit AI Hackathon.
- Finalist — Smart India Hackathon (Internal Round).
- Top 20 — IBM Ice Day Solvathon.
- Secretary — NSS Society, GLA University.
